

When you take metal used to construct wings on an airplane, yachts, and the chassis of an Audi A8, and transform it into a patio cover structure, not only do you get superb engineering, but you literally get the highest quality materials that automatically meet or exceeds State, County and local building codes.

This means our beams can span 34+ feet from one post, to the next, without any support. From all of our years in construction, this is the one item that single-handedly makes your home look more valuable, functional, and turns your outdoor living into a sense of paradise.

Not to mention, the versatility our material brings to the table allows you to build:

- Pergola
- Fencing / Gates
- Carport
- Enclosures and more!
